

# Security Revolving Door from Alvarado dormakaba Group Increases Facility Security While Maximizing Traffic Flow

INDIANAPOLIS, April 10, 2024 – As corporations seek to increase access control with fewer personnel, the sensor technology driving the Security Revolving Door (SRD) from Alvarado dormakaba Group makes it an ideal solution for high-security, unmanned, high-traffic entrances such as data centers, test labs, and government facilities.

The Alvarado SRD is a secured revolving door designed to not only detect but prevent tailgating and piggybacking attempts. The SRD detects unauthorized passage attempts through overhead sensors that prevent the passage from being completed while still maximizing traffic flow. The SRD can be configured for entry or exit only or bidirectional authentication, allowing facilities to track occupancy in real time. It is compliant with building codes and available in three models tailored to the customer's security needs.

"When detecting a security breach is not enough, and clients require full prevention, the Alvarado SRD is the product of choice," said Nick Simon, national security sales manager for Alvarado dormakaba Group. "Our SRD ensures that only authorized users gain access to the facility, creating a more safe and secure environment for our clients."

The SRD is intuitive for users. Once an authorized user approaches the door and presents a valid credential to the reader, the user enters the available compartment, at which point the SRD begins to automatically rotate, allowing for a seamless entry into the facility with little disruption to throughput rates. In fact, since users can enter and exit the lane at the same time, throughput rates can reach up to 44 people per minute. Once the compartment is clear, the door returns to the home position and is ready for the next valid user. The SRD fully integrates with existing access control systems, making the integration simple.

The SRD is available in three models that include:

SRD-S2: Bidirectional tailgate prevention and unauthorized entry on exit prevention.

SRD-S3: Same features of the SRD-S2 with the addition of piggyback prevention on entry.

SRD-S4: Same features as the SRD-S3 with the addition of piggyback prevention on exit.
